

INSTRUCTION SHEET

Step 1

Install Pybluez, Bluez libraries

<https://github.com/pybluez/pybluez>

<http://www.bluez.org/>

Step 2

Use Microsoft Visual Studio editor. Copy the code file into a new .py script.

Step 3

The code file, "inq_with_rssi.py" should be run in root.

Use the command sudo su in the terminal.

Step 4

Run the .py file.

Notes

Install plotly, numPy libraries in the root folder of the device.

A Web Browser is also required as all the results are generated in a browser.

Upon successful installation and running of the file, all the results can be viewed in the terminal itself.
